

CLAIMS

1. A landing stage for an offshore wind power installation, comprising
a mooring location for ships,
a landing area for helicopters, and
a common route link from the mooring location and the landing area to the
installation, the mooring location and landing area being on a common platform.
2. The landing stage according to claim 1 wherein the mooring
location and the landing area in addition to the foundation of the installation in the sea
have their own foundation.
3. The landing stage according to claim 1 wherein the landing stage is
arranged at the lee side of the installation in relation to a prevailing wind direction at the
location of the installation.
4. The landing stage according to claim 1 wherein the foundation of
the landing stage is arranged on the seabed.
5. The landing stage according to claim 1 wherein the landing stage is
supported floatingly in the sea.
6. The landing stage according to claim 1 wherein the landing stage is
rotatable about the installation about a vertical axis.
7. The landing stage according to claim 1, further including: logistical
and/or infrastructural items of equipment which can be jointly used at the mooring
location and the landing area.

8. The landing stage according to claim 7 wherein the items of equipment are jointly usable buildings for the storage, intermediate storage and preparation of articles which are transloaded at the mooring location and/or the landing area, and/or buildings for means which serve for the supply and/or operation of the craft using the landing stage, and/or residential buildings for personnel seeking protection and/or for maintenance personnel, who travel with the craft and/or are used for movement of the craft, for example as pilots.

9. The landing stage according to claim 7 wherein the items of equipment are jointly usable navigational aids, in particular radio direction-finding transmitters, light signaling installations and/or radar equipment.

10. The landing stage according to claim 1 comprising a concrete platform at the top side, on which the landing area is arranged with the mooring location disposed at the edge thereof.

11. The landing stage according to claim 1 further including a steel framework and/or steel plate structure.

12. The offshore wind power installation according to claim 1 wherein the landing area is horizontally remote from a pylon of the wind power installation by at least two-thirds of the length of a rotor blade.
